LAUDA – the big one – Overview

Aqualine
25...95 °C

The universal **water baths** for the laboratory
from 25 up to 95 °C

Alpha
-25...100 °C

Heating and cooling thermostats
for cost effective thermostating in the laboratory
at temperatures from -25 up to 100 °C

ECO
-50...200 °C

NEW

Viscocoool, Viscotemp

Heating and cooling thermostats
for economical thermostating in the laboratory
from -50 up to 200 °C

Proline
Proline Kryomats
-90...300 °C

Heating and cooling thermostats
with temperatures from -90 up to 300 °C for
professional use in materials testing, research
and quality control

Integral T
Integral XT
-90...320 °C

NEW

Integral XT 4 H, XT 4 HW, XT 8 H, XT 8 HW

Process thermostats for professional external
thermostating across a wide temperature range from
-90 up to 320 °C

Microcool
-10...40 °C

NEW

Variocool
-20...40 °C

NEW

Circulation chillers for cost effective cooling in the
lab and in research from -10 up to 40 °C

Circulation chillers for variable use in laboratory,
mini-plant and production for temperatures from
-20 up to 40 °C (optional up to 80 °C)

Calibration thermostats
Digital thermometers
-40...300 °C

Calibration and adjustment with
LAUDA calibration thermostats at
temperatures from -40 up to 300 °C

Advantages

Large selection

LAUDA has the right solution for almost any requirement. The water baths and the high-value LAUDA Alpha heating and cooling thermostats are the first choice for routine tasks. The ECO and Proline thermostats allow temperature control that is both professional and economical. High cooling capacities and rapid cooling rates are provided by the Proline Kryomats and the high-performance Integral T und Integral XT process thermostats ensure lightning-speed temperature changes with external temperature regulation.

Convenient use

LAUDA equipment stands out for its excellent handling, optimum ergonomics and intuitive operation. As such, the removable Command remote control allows rapid changes of operation settings. A self-adaptation of the controller is already integrated into all LAUDA Proline cooling thermostats with a Command remote control as well as all LAUDA Integral XT process thermostats. It automatically calculates the optimum control parameters for different applications.

Proverbial quality

For almost 60 years now, LAUDA has been developing, engineering and producing high-class constant temperature equipment and measuring instruments of outstanding quality. From the start, the owners and directors promised to deliver the highest quality standards to their clients, business partners and to the global scientific community. The guarantee of user-friendliness, optimum functionality and high safety standards has always been the full attention and concentration of all LAUDA employees - which, now more than ever, produces what has become the proverbial LAUDA longevity and durability.

Industry leading safety concepts

All products are compliant with the strictest safety requirements and constraints. Consideration is given to all the relevant DIN and international standards such as IEC, UL and CSA. Furthermore, intelligent technologies and sophisticated safety concepts provide a good feeling to any application. As such, the LAUDA Proline and ECO, for example, have "double safety circuit" technology with reciprocal checking μ -controllers, which switch off the equipment in the event of a fault. The electronic low-level protection detection of the ECO allows operation only when the function is fault-free.

First class support – internationally

The LAUDA team at our headquarters and in the international subsidiaries and agencies, the professionally and comprehensively trained sales representatives, and the staff of the specialist laboratory facilities provide friendly, fair and competent advice. Together with our clients, LAUDA helps application experts to configure application-specific systems.

Reliable service

LAUDA equipment is known for its robustness and durability. However, should you ever need support – usually after many years of installation – we are there for you: as a LAUDA customer, you have access to comprehensive services, ensuring greater flexibility and profitability. One thing is certain: LAUDA service will not let you down.

World market leader with Tradition

1956 The first year

In the small town of Lauda located in the German region of Baden, Dr. Rudolf Wobser founds the Messgerätewerk Lauda Dr. R. Wobser KG, and three years later the first serial production of thermostats starts.

1964 The first systems for industry

Now LAUDA is building industrial heating and cooling systems for technical laboratories and production as well.

1967 The first measuring instruments

Again LAUDA is putting groundbreaking new developments on the market: the first tensiometer and the first film balance.

1977 Dr. Gerhard and Karlheinz Wobser take over the management

After the death of their father Dr. Rudolf Wobser, the brothers take over the management and divide the areas of responsibility.

1989 The first year under today's new name

LAUDA sees an expansion of the range of products, and thus the company is renamed from Messgerätewerk Lauda Dr. R. Wobser KG into LAUDA DR. R. WOBSEER GMBH & CO. KG.

2003 Dr. Gunther Wobser is appointed Managing Director

Karlheinz Wobser retires. Dr. Gunther Wobser, part of the company since 1997, is appointed managing partner.

2005 Establishment of the first subsidiary LAUDA France

The French subsidiary shall support the representations and customers in the market by consultation and service.

2006 The constant size – 50 years of LAUDA

The 50th anniversary is celebrated on March 1, 2006, the day when the founder of the company Dr. Rudolf Wobser set up LAUDA company in the town of Lauda.

2008 Expansion course with new subsidiaries

By setting up the subsidiaries LAUDA America Latina C.A., LAUDA China Co., Ltd. and LAUDA Brinkmann, LP, USA, LAUDA consistently continues the world-wide expansion course.

2010 Dr. Gerhard Wobser resigns from office

After 39 years as a Managing Director, Dr. Gerhard Wobser resigns from office in March 2010. His son, Dr. Gunther Wobser, takes over his duties.

2011 Expansion in Spain

With the founding of the Spanish subsidiary LAUDA Ultracool S.L., LAUDA broadens the product range with industrial process circulation chillers from the "Ultracool" brand.

2012 Great Britain becomes a LAUDA place of location

Foundation of subsidiary LAUDA Technology Ltd. in Birmingham, Great Britain.

2013 Headquarters expansion and investment in China

LAUDA invests over 6 million Euro into a new logistics center, production hall and opens a production site in Shanghai.

Managing Director Dr. Gunther Wobser

Dr. Gerhard Wobser

LAUDA, Ultra-Kryomat, Kryomat, LAUDA Vario pump and iVisc are registered trademarks of the LAUDA DR. R. WOBSEER GMBH & CO. KG

With more than 400 employees, more than EUR 60 million in annual turnover and eight foreign subsidiaries, LAUDA is the global leader in the manufacture of innovative constant temperature equipment and systems for science, application technology and production, as well as for high- quality measuring devices. With almost 60 years of experience and a unique product portfolio ranging from compact laboratory thermostats to industrial circulation chillers to customized heating and cooling systems with more than 400 kilowatts of cooling power, LAUDA is the only company that can guarantee optimized temperature throughout the entire value-added chain for its 10,000 plus customers worldwide.

Quality products from LAUDA keep temperatures constant to an impressive 5 thousandth °C or make targeted changes in an area spanning -150 to 400 °C. Through active cooling or warming, production processes are accelerated or, indeed, made possible in the first place. In such cases, LAUDA, for example, replaces the uneconomical mains-water cooling with environmentally friendly and cost-efficient devices or, alternatively, uses existing forms of primary energy such as thermal discharge. LAUDA measuring instruments determine the surface tension, tension limit and viscosity of liquids precisely

As a highly specialized niche provider, LAUDA ranks either first or second in almost all future-oriented sectors. In the semi-conductor industry, all the renowned manufacturers and suppliers place their trust in LAUDA thermostats and heating and cooling systems. LAUDA quality products also enable both the research and mass production of vital medicines. In the growing medical technology market, circulation chillers made by LAUDA cool patients and guarantee safe openheart surgery. LAUDA industrial circulation chillers provide reliable and cost effective cooling for printing machines, injection moulding plants and laser processing machines equipment. Further principle applications include material inspection, biotechnology and the cooling of laboratory instruments and machines. LAUDA thermostats are, naturally, also used in the measuring instruments manufactured by us. For example, in order to determine the viscosity of aviation fuel under real conditions at 10,000-meter altitude, the sample is cooled in the laboratory down to -60 °C.

Through numerous innovations and ongoing investment, LAUDA is sustainably improving its excellent market position and is growing both in the main European market as well as overseas.

LAUDA – The right temperature worldwide

Robust and economical: LAUDA viscothermostats

LAUDA is expanding its range of viscothermostats for manual and automatic viscometry. The new Viscotemp series supplements the robust, tried-and-tested stainless steel viscothermostats with its excellent price-performance ratio. A first with the Viscocool 6 with low bath volume is the integrated Peltier cooling and lighting in space-saving and compact design. This way, external cooling is not necessary in order to maintain the often required 20 or 25 °C. The integrated Peltier cooling guarantees an operating temperature range of up to 15 °C below room temperature.

LAUDA Microcool: circulation chillers in a compact design with an excellent price performance ratio

LAUDA is offering a new line of equipment for simple cooling applications with the Microcool circulation chillers. LAUDA Microcool is designed as a low-cost circulation chiller line with four compact models with cooling performances of 0.25 to 1.2 kW. The most powerful model is available as an air-cooled or water-cooled version. The circulation chillers are suitable for temperature control tasks up to -10 °C. The operating element with a large LED display and membrane keyboard enables clear and simple menu guidance. An RS-232 interface and an alarm contact are integrated as standard.

LAUDA Variocool: circulation chillers with flexible equipment possibilities and simple operation

With the new Variocool circulation chillers LAUDA presents a great selection of models with a very wide performance range. The product line offers 13 models with many different options for demanding temperature control tasks. A color TFT display provides visibility to operating parameters and allows for ease of use. A USB interface and an alarm contact are integrated as standard. Other interfaces are available as accessories. The circulation chillers operate in the range between -20 and 40 °C. The maximum temperature range can be extended to 80 °C with use of an optional heater. Optional pumps are available in the versions from VC 1200 for higher pressure requirements.

The high temperature thermostats: LAUDA Integral XT

Within the Integral XT product family, a total of four process thermostats, which were designed as pure heating thermostats extend the range of the product line. The XT high temperature thermostats provide a maximum operating temperature of 320 °C. The thermostats are operated using the Command remote control, which is already known from the other XT models. With the XT 4 HW and the XT 8 HW models, water counter-cooling guarantees a quick cool down across the entire temperature range.

Our energy saving stars

Constant temperature equipment requires power, especially cooling thermostats in constant operation and working to full capacity. Our cooling thermostats with electronic expansion valves regulate refrigeration with the utmost precision and only use the minimum amount of energy required. This reduces costs and helps with environmental conservation efforts. In this brochure, special energy-efficient thermostats are now listed for the first time with the "Energy Saving Star" label.

LAUDA – much more than constant temperature equipment

The right temperature worldwide and the greatest precision – at LAUDA, these claims also extend to include extremely high performance heating and cooling systems, intelligent measuring instruments and process circulation chillers for industrial applications.

LAUDA Ultracool

The LAUDA Ultracool industrial circulation chillers with a cooling output of up to 265 kilowatts and a working temperature range from -5 up to 25 °C are used by the manufacturers of, for example, printing machines, injection moulding plants and laser processing machines. They have versatile options, provide reliable temperature control and ensure secure processing.

LAUDA measuring instruments

Viscometers and tensiometers from LAUDA are essential for the analysis of polymers, oils, greases and tensides. With the modular concept of the PVS process viscometer, measuring routines may be conducted

effectively, quickly and safely and repeated as desired. The LAUDA iVisc capillary viscometer is new, space-saving, fully automatic and easy to operate. With LAUDA tensiometers, it is possible, for example, to determine the exact interfacial surface tension of transformer oils.

LAUDA heating and cooling systems

In accordance with the principle of "modular engineering", LAUDA process cooling systems, heat transfer systems and secondary circuit systems are planned and built precisely according to customer's wishes: process-oriented, customized and with precision control, meeting strict safety standards. With a temperature range of -150 up to 400 °C, LAUDA systems heat and cool to an accuracy of one tenth of a degree Celsius. As the requirements for temperature regulation systems are constantly increasing, the modern LAUDA heating and cooling modules are flexibly extendable and modifiable.

LAUDA Aqualine

The universal water baths for the laboratory
from 25 up to 95 °C

Application examples

- Preparation of medical samples for analysis
- Temperature control of cytological samples
- Pre-thermostating of samples for spectroscopic tests
- Use in colleges, hospitals and education

Reliable, compact and ergonomic

The **LAUDA Aqualine** water baths offer an affordable entry into laboratory thermostating. The equipment range for basic applications in the laboratory stands out for its simple operation with digital LED display and high reliability. The devices have no circulating pumps and no

fittings within the bath. Consequently, they are corrosion-resistant, easy to clean or disinfect, and provide maximum use of internal bath space. The heating elements housed under the bath vessel ensure homogenous temperature distribution without localised overheating.

Your advantages at a glance

The Aqualine advantages

Your benefits

- Heating of the bath bottom across the entire base
- Patented low-level protection, minimum fill level of only 2 cm

- Excellent temperature homogeneity in the bath and optimum use of the internal space
- Bath operation almost independent of the fill level

- Recessed operating elements
- Luminous digital LED display
- Controller electronics integrated into the housing

- Dirt and drip-proof electronics
- Easy operation
- Smallest possible unit footprint

- No heaters, sensors or other fittings in the bath vessel

- Easy-clean interior
- No niches for hidden growth of germs
- Full use of the bath

- Transparent polycarbonate gable covers removable without tools are a standard feature.

- Easy and quick visual inspection of the samples in the bath
- Easy cleaning, no height restrictions

- Optimized roof shape

- Prevents sample contamination from condensation

LAUDA Aqualine

Aqualine Water baths

The LAUDA Aqualine water baths are available in five different sizes. Depending on the size and the quantity of the samples, the user has the right bath depth or opening for his application at his disposal. All the baths are made from moulded stainless steel, and do not have any fittings. As a result, the interior is used to its full advantage, and the number of samples per bath is maximised. Above all, the LAUDA Aqualine is designed for the requirements of biological, medical and biochemical laboratories. Thanks to the patented heating concept, the baths also achieve a high level of temperature homogeneity.

LAUDA Alpha

Heating and cooling thermostats for cost-effective thermostating in the laboratory at temperatures from -25 up to 100 °C

Application examples

- Sample preparation for chemico-pharmaceutical analysis
- Quality control
- Precise temperature control in sensitive areas such as medical serology
- Versatile thermostating tasks in the field of biotechnology

Reliable technology, modern design, favorable price

LAUDA Alpha is the cost-effective choice in the area of high-quality LAUDA thermostats. The temperature range from -25 to 100 °C covers the larger part of all basic thermostatic applications within the laboratory. This is exactly the working temperature range of the LAUDA Alpha. This well-priced equipment range is made possible

by minimizing any unnecessary features, with the focus on reliability and user-friendliness. The thermostats are suitable for operation with non-flammable liquids (water, water/glycol) and for both internal and external thermostating tasks. A 1-point-calibration of the thermostats can be carried out by the user.

Your advantages at a glance

The Alpha advantages

Your benefits

- 3-button operation with large, clearly legible LED display
- Low level protection with acoustic and visual alarm
- Timer function integrated

- Easy and intuitive menu navigation
- Easily legible display values
- Automatic shut-off of heater and pump when level of heat transfer liquid is too low
- Automatic shut-down (stand-by) after preset time

- Automatic compressor control supplies strong cooling output only when needed – up to 425 W

- Cost-effective operation
- No unnecessary energy consumption
- Equipment-saving principle extends the life of the compressor

- Alpha immersion and heating thermostats with screw clamp

- Easy to change to different bath vessels with a wall thickness of up to 30 mm

- Variable flow rates via inserts and fittings

- The rate of circulation can be adapted to the size of the bath

- Removal of the front cover without tools

- Easy cleaning of the cool air inlet
- Extended maintenance intervals

LAUDA Alpha

Alpha Immersion thermostat

The immersion thermostat A can be used for any bath with a wall thickness of up to 30 mm by means of the screw clamp included in the scope of delivery. Using the additional pump circulation set and a cooling coil, the immersion thermostat can be expanded to form a full-fledged thermostating system.

LAUDA ECO

Heating and cooling thermostats
Economical thermostating in the laboratory
from -50 up to 200 °C

Application examples

- Precise temperature regulation in quality assurance and analytics
- Sample preparation in chemistry and pharmacy
- Temperature control in electronics and life sciences
- Cooling in material tests

Precise, economical, flexible

With the ECO LAUDA is continuing the amazing success story of the equipment series, LAUDA Ecoline. There are innovations and developments particularly with regard to the range of features and the ease of operation. Both control heads, designated ECO Silver and ECO Gold, have a powerful circulating pump with a more than 30 percent higher pump capacity compared to the predecessor models. A menu navigation in plain text allows easy operation of the devices. Both control heads are equipped with a mini-USB

interface as standard. Further interfaces are available as modules. Another innovation is the practical allocation of a flow-rate switch at the front on the control head. This means that individual adjustment of the flow between internal and external circulation is possible even during operation. Variants in 230 V; 50 Hz are also available with natural refrigerants. The most powerful units are equipped with the energy-saving LAUDA SmartCool system. All cooling thermostats are available as air-cooled or water-cooled variants.

Your advantages at a glance

The ECO advantages

Your benefits

- Menu navigation via monochrome LCD (Silver) or colored TFT display (Gold)
- Programmer with both models

- Easy and clear operation
- Parameters are clearly readable
- Automation of temperature variations and test series

- Cooling outputs of 180, 200, 300 and 700 W and minimal temperature ranges from -15 up to -50 °C
- All cooling thermostats available as air and water cooled versions
- Also with natural refrigerants
- Energy-saving SmartCool System with 700 W cooling output

- Application related temperature control
- Choice of models regarding ambient conditions
- Very low global warming potential
- Energy and cost savings with digital cooling management

- Strong circulation pump with six levels; flow rate switch placed at the front of the control head for internal or external circulation
- Pump connections as standard with cooling thermostats
- Cooling coil as standard with heating thermostats

- Adaptation of pump power to applications and different bath sizes
- Convenient working even at ambient temperature, without cooling
- Temperature control of external applications
- Connection of cooling water or external cooling for work below ambient temperature

- Mini-USB interface as standard
- Upper module slot: Analog, RS 232/485, contact or Profibus module, to insert as an accessory
- Lower module slot: Pt100/LiBus module as accessory

- Computer connection and easy software updates
- Provides user with flexible control options
- Precise control of external applications
- Command remote control via LiBus

- Drain valves standard on all heating and cooling thermostats with stainless steel baths at the back of the devices

- Easy and safe changing of heat transfer liquids

LAUDA ECO

ECO Control head Silver

The control heads Silver with 1.3 kW heater power (230 V) are perfectly suited for thermostating tasks up to 150 °C. They are fitted with a monochrome LCD display.

Silver

- 1.3 kW heater power (230 V), working temperature range up to 150 °C
- LCD display, resolution of indication 0.01 °C
- Operation via cursor and softkeys
- Simultaneous display of set and actual temperature, navigation in plain text
- Selectable operating temperature range and additional button for overtemperature protection setting
- Safety class III, FL for flammable liquids
- 1-point calibration by the user
- Programmer with one program and 20 segments
- Vario pump with six levels, flow rate switch for internal or external circulation
- Mini-USB interface as standard

ECO Control head Gold

The control heads Gold with a heating power of 2,6 kW (230 V) have a working temperature range of up to 200 °C. They are provided with a larger colored TFT display. Temperature profiles can be displayed graphically. A comprehensive programmer with five programs and 150 temperature-time segments is a further distinctive feature compared to Silver.

Gold

- 2.6 kW heater power (230 V), working temperature range up to 200 °C
- Colored TFT display, resolution of indication 0.01 °C
- Operation via cursor and softkeys
- Simultaneous display of set and actual temperature, navigation in plain text
- Selectable operating temperature range and additional button for overtemperature protection setting
- Safety class III, FL for flammable liquids
- 1-point calibration by the user
- Graphical display of temperature profiles
- Programmer with five programs and 150 segments
- Vario pump with six levels, flow rate switch for internal or external circulation
- Mini-USB interface as standard

ECO Immersion thermostats

The ECO immersion thermostats can be used for any bath with a wall thickness of up to 30 mm and a bath depth of at least 150 mm by means of the screw clamp included in the scope of delivery.

ECO Air-cooled cooling thermostats with control head Silver

The cooling thermostats with control head Silver are available in the temperature range from -50 up to 150 °C. They are equipped with a bath cover and pump connections for external applications as standard. The pump connections are nipples made of high-quality plastic with an outer diameter of 13 mm. The RE 415 S is the basic model with minimised foot print. The RE 1050 S with SmartCool digital cooling management can be used down to -50 °C and provides a cooling capacity of 700 W at 20 °C. Thanks to the larger baths, both models RE 1225 S and RE 2025 S are excellently suited to applications inside the bath.

Variants in 230 V; 50 Hz are also available with natural refrigerants throughout the EU and Switzerland (except RE 415).
Cat. No. for models with natural refrigerants see page 95.

Air-cooled cooling thermostats with control head Gold

The cooling thermostats with control head Gold work up to 200 °C. Included as standard is a bath cover and pump connections made of stainless steel with M16 x 1 threads. The RE 1050 G has an especially high cooling capacity and reaches temperatures down to -50 °C. The integrated SmartCool system ensures remarkable energy and cost savings. The RE 415 G with small foot print saves valuable laboratory space.

Variants in 230 V; 50 Hz are also available with natural refrigerants throughout the EU and Switzerland (except RE 415).
Cat. No. for models with natural refrigerants see page 95.

ECO Water-cooled cooling thermostats with control head Silver and Gold

The cooling thermostats with control heads Silver and Gold are also available as water cooled models. By discharging process heat to the cooling water, heating-up of the environment will be reduced. This is an advantage when using several devices or at high ambient temperatures.

Variants in 230 V; 50 Hz are also available with natural refrigerants throughout the EU and Switzerland (except RE 415). Cat. No. for models with natural refrigerants see page 97.

Viscocool and Viscotemp Viscothermostats with transparent bath and Silver and Gold control heads

The tried-and-tested ET 15 baths made from polycarbonate provide space for immersion of a maximum of three glass capillary viscometers for manual measurement using the stop watch or for up to two automatic measuring stations for iVisc or S 5 (PVS). If required, when using dilution viscometers for example, up to two magnetic stirrers can be added to the thermostat.

Specifically for applications near room temperature (15 to 30 °C), the ET range was expanded upon with the inclusion of the extremely compact, electronic Viscocool 6 version which is cooled using Peltier technology. It can provide cooling without a cooling water connection or any additional devices. The similarly new round solid glass bath Viscotemp 18 is used particularly for temperatures around 100 °C for operation with silicone oils and with aggressive samples. Outstanding insights in the smallest space can be achieved thanks to up to five stop watch measuring stands. Alternatively, it can be equipped with an iVisc or PVS measuring stand and thermostating position.

Viscothermostat Viscocool 6

Special features

- Baths made from polycarbonate or glass with 6 to 18 liters bath volume
- Ideal for operation between 20 and 40 °C
- For up to two automatic or five stop watch measuring stations
- Optionally with the control head ECO Silver or ECO Gold (except for Viscocool 6)
- Simple design makes quick cleaning possible
- Variopump with six pumping levels and pump flow distribution for perfect homogeneity
- Display with standards-compliant resolution of 0.01 K
- Can be combined with LAUDA through-flow coolers
- Intuitive operation via cursor and softkeys
- Polycarbonate bath Viscocool 6 with integrated Peltier cooling and double chamber system

Viscotemp Viscothermostats with stainless steel bath and control head Silver and Gold

The new Viscotemp 15, 24, and 40 viscothermostats with high-quality stainless steel baths and glass windows can be used in the most common temperature range from 0 up to 105 °C. The clearly designed single-chamber systems with optional background lighting provide a glass-clear view and can be easily cleaned. They are ideal for determining, for example, the viscosity index of motor oils or the solution viscosity of plastics. The Viscotemp 15 type offers space for up to four manual measuring stations or two automatic measuring stands, iVisc or S 5 (PVS). Viscotemp 24 has space for seven viscometers or up to four automatic measuring stands. Both versions can be fitted with cleaning modules. Viscotemp 40 was designed exclusively for manual measurements with twelve measuring stations. With the Therm 180 heat transfer liquid, the thermostats can be operated as a corrosion-resistant thermostating bath for aggressive samples, e.g. for polyamides dissolved in sulfuric acid.

Viscothermostat Viscotemp 24 G with cover plate 24 K
– Cover plates not included in delivery –

Special features

ECO Heating thermostats with transparent bath and control head Silver and Gold

LAUDA ECO units with transparent plastic baths provide the necessary visibility in all cases where test samples need to be observed during thermostating. The thermostats with baths made from polycarbonate can be used in the temperature range of up to 100 °C. They have a filling volume of 5 up to 20 liters.

ECO Heating thermostats with stainless steel bath and control head Gold

The heating thermostats with control head Gold can be used in a temperature range of up to 200 °C. All heating thermostats are equipped with a cooling coil as standard. The E 4 G is fitted with a bath cover and pump connections for external applications with M16 x 1 threads.

LAUDA Proline

Heating and cooling thermostats with temperatures from -90 up to 300 °C for professional use in research, application engineering and production

Proline

Application examples

- Temperature control for chemical synthesis
- Tests on electronic components at different temperatures
- Temperature control of measuring structures in process technology
- Heating and cooling of glass reactors

Proline Kryomats

Application examples

- Constant temperatures in the notch bending test and drop test
- Changing temperatures when determining the pour point, Brookfield test of lubricants and test of slide bearings

Intuitive operation, ultra high and low temperatures

LAUDA Proline thermostats are our solution for high performance and reliable temperature regulation. With their broad temperature range they fulfill high requirements. LAUDA Proline thermostats are available in two versions: in the basic version with the Master control head, and as a Command version with a removable

control unit for enhanced ease of operation. Master version devices can be retrofitted with the Command remote control, which are simply connected to the control head. The thermostat automatically recognises and controls all newly installed moduls.

Your advantages at a glance

The Proline advantages

Your benefits

- Master or Command version
- 52 different devices
- Simple retrofitting from Master to Command version

- The right solution for every application
- Subsequent extension or adaptation to changing application requirements

- Graphical user guidance
- Adaptive control on cooling thermostats

- Easy and intuitive operation
- Saves time-consuming calculation of control parameters

- Patented SmartCool system
- PowerAdapt system for adjustment of the power consumption

- Up to 75 percent energy saving with digital cooling management
- Use of the maximum available output from the power supply system

- Two insert ports can be combined with five different interface modules
- Easy distribution of the pump flow by means of bypass valve
- Pump connections on the side and rear

- High level of flexibility for the user allowing for broad range of system integration
- Simultaneous connection of two external applications
- Flexible connection of external applications from different sides

- High-performance pressure-suction pump (Varioflex pump) with eight pump levels
- Up to 3.5 kW (230 V) heating power – even on all cooling thermostats via SmartCool system

- Suitable for internal and external applications
- Adaptation of the pump power to the respective application
- Rapid heating achieved

LAUDA Proline

Proline Master control head

The Proline Master devices are designed with high thermostating accuracy and reliability for all applications from -90 up to 300 °C where operating parameters are not changed or modified frequently. They have all the basic features and safety functions required for professional thermostating during continuous use. A modular structure and bus technology have created an instrument capable of extending its function and performance as the application requires.

- Easy-to-read green LED display
- Convenient setting of set-temperature and Varioflex pump via three operation buttons
- Indicator lights for heating, cooling, external control and alarm
- Resolution of indication 0.01 °C, setting resolution selectable 0.1 or 0.01 °C
- Selectable operating temperature range and additional button for overtemperature protection setting
- External temperature control via Pt100
- Optical and audible alarm function
- Simple temperature probe calibration
- Integrated mains network safety device
- Start mode control (automatic or manual)
- Two slots for interface modules
- LAUDA Wintherm Plus control software via RS 232/485 interface (optional)

Easy replacement of interface modules

Alarm message for malfunction

Upgradable to Command version

Proline Command control head

The Command control heads are the top models of the LAUDA Proline. The highly-efficient programmer fulfills all the requirements of complex thermostating processes – with real-time function. It offers the utmost in user-friendliness and optimum functionality, e.g. for an industrial testing lab. The simple menu-driven operation and the easy editing of test programs allow for quickly changing thermostating tasks. The Command remote control is removable and can easily be used with cable up to 50 m. Comprehensive basic equipment as with the Proline Master range.

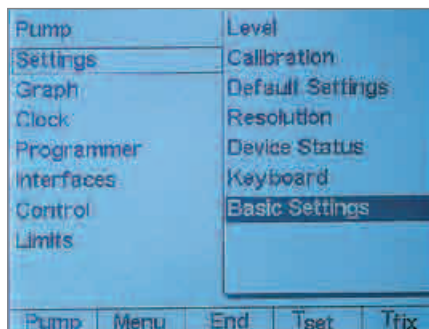

Basic equipment as Proline Master, plus:

- 10-key console for setpoint adjustment of temperature
- Programmer with real-time clock, 150 temperature/time segments, for use in up to 5 programs, editable segments with loop and tolerance band function
- High resolution, back-lit, graphic LCD display with various display possibilities
- Detachable Command remote control for use with cable up to 50 m
- Eight freely selectable fixed temperatures with memory function
- Resolution of actual value display up to 0.001 °C
- RS 232/485 interface for LAUDA Wintherm Plus software
- Menu guidance in German, English, French and Spanish

An opto-decoupled RS 232/485 interface is integrated as standard

Drop-down menus make settings easy. Available in four languages.

Graphic display of temperature values

LAUDA Proline

Proline Heating thermostats with Master control head up to 19 liters

The heating thermostats of the LAUDA Proline with Master control head do not only convince because of their compact construction. The high heater power of 3.5 kW (230 V), two interfaces for various modules, a cooling coil fitted as a standard feature, and an integrated external control – these features make them particularly useful for users who require flexible thermostating operations while only rarely needing to adjust the settings.

Proline Heating thermostats with Master control head up to 53 liters

The LAUDA Proline P 26, P 40 and P 50 heating thermostats are distinguished by particularly large-volume baths. All the below models are equipped with a Varioflex pump and cover the temperature range from 30 up to 300 °C. These stainless steel baths are ideally suited to direct thermostating inside the bath. The P 40 is particularly suitable for thermostating applications needing a large submersion depth. The P 26 and P 50 models with their wide baths, allow long or bulky test pieces to be placed in the bath or even enable a number of test pieces to be positioned alongside each other, for simultaneous testing.

A circulation chamber on the P 40 and P 50 ensures good mixing in the bath and thus guarantees good temperature homogeneity, despite the large bath vessel.

LAUDA Proline

Proline Heating thermostats with Command control head up to 19 liters

The Proline heating thermostats with Command control head (C) impress through an expanded scope of functions. Alongside a graphic LCD display, which enables current values to be displayed up to 0.001 °C resolution, an easily editable and convenient programmer with storage possibilities is available. The standard RS 232/485 interface enables communication with a computer. Work flexibly with Command: The Command remote control can be quickly and easily detached from the thermostat.

Proline Viscothermostats

LAUDA viscothermostats are optimized for directly observing inserted objects. The temporal and spatial temperature stability required for precisely determining the viscosity is guaranteed for the full temperature range. As such, they are ideal for use with the fully automated LAUDA PVS or iVisc viscometers. Thanks to the double-chamber principle, a constant liquid level in the measuring room is guaranteed regardless of the rate and temperature. The PVL models are equipped with five layers of insulating glass and by connecting a DLK 45 through-flow cooler or Proline RP 890 cooling thermostat are suited to low-temperature measurements down to -40 or -60 °C.

Proline Bridge thermostats

LAUDA Proline bridge thermostats are available in two versions with different pump models and immersion depths. The PB models have a pressure/suction pump and require a bath depth of 200 mm, while the PBD models have a more powerful pressure pump (D) and require a bath with a depth of 320 mm. In addition, both series of models differ in the selected control head: Master or Command (C). Through variably extendable telescopic rods, all models can be attached without problem to baths with a width from 310 mm up to 550 mm.

LAUDA Proline

Proline Cooling thermostats with Master control head up to 8 liters

The Proline RP 845, RP 855, RP 870 and RP 890 cooling thermostats stand out above all for their compact dimensions and small footprint. With a cooling capacity of 1.6 kW at 20 °C, the RP 855 has a particularly high-performance design. The RP 890 low-temperature device enables you to reach temperatures down to -90 °C. The standard integrated electrical-heated bath cover set prevents icing as a result of condensation and humidity on all Proline cooling thermostats with a temperature range down to -90 °C.

Proline Cooling thermostats with Master control head up to 35 liters

The Proline RP 1290, RP 1840, RP 1845 and RP 3530 cooling thermostats differ in terms of bath volume, achievable cooling capacity, and working temperature range. With bath capacities up to 35 liters, the RP 3530 provides a particularly large bath volume and the RP 1845 provides a particularly high cooling capacity of 1.6 kW. To prevent icing the RP 1290 is equipped with an electrical-heated bath cover set.

LAUDA Proline

Proline Cooling thermostats with Command control head up to 8 liters

The SmartCool system – an energy-saving, digital cooling management system – ensures that every temperature is run with the correct cooling capacity. It increases or reduces the cooling according to application requirements. The advantages are particularly effective for programmer operation and temperature ramping.

The Proline cooling thermostats with the Command control head (C) have a convincing extended range of functions. At 20 °C, RP 855 C has a particularly high cooling capacity of 1.6 kW. RP 890 C and RP 1290 C are designed for especially low temperatures. They differ in terms of bath volume and have an electrical-heated bath cover set as a standard feature.

Proline Cooling thermostats with Command control head up to 35 liters

Thanks to their various capacity ranges and filling volumes, the Proline cooling thermostats which make up the Command range skilfully adapt to your requirements. The RP 1845 C works at a temperature range between -50 and 200 °C and, at 20 °C, has a cooling capacity of 1.6 kW. The RP 3530 C has a particularly large bath for internal sample thermostating. The RP 1290 C comes with an integrated electrical-heated bath cover set as standard.

LAUDA Proline Kryomats

Extra powerful cooling thermostats for bath applications from -90 up to 200 °C
LAUDA Proline Kryomats

Application examples

Constant temperatures

- Notch bending test
- Drop test

Changing temperatures

- Determination of pour point
- Brookfield test of lubricants
- Test of slide bearings

The **Proline Kryomats** are floor-standing, low temperature thermostats suitable for a wide variety of applications. They never fail to impress through their compact design and high cooling capacities, especially at low temperatures. All Proline Kryomats are fitted with the Command remote control for easy and user-friendly operation. The units are equipped with a pressure pump optimized for internal

circulation adjustable from performance level five to eight. To prevent moisture in the atmosphere from condensing at low temperatures, bath bridge and bath edge heating are integrated into the design. Proline Kryomats stand out for having the latest technologies and an excellent price-performance ratio.

Your advantages at a glance

The Proline Kryomats advantages

Your benefits

- Removable Command remote control with graphic LCD
- Automatic adjustment of the control parameters via integrated software for adaptive control

- Easy and intuitive operation. Quick setting changes
- Saves time-consuming calculation of control parameters

- Offset control head
- Integrated bath edge and bath bridge heating
- Use of innovative cooling technology

- Allows installation of optional supplementary pumps for external applications
- Avoids condensation and ice build-up
- High cooling capacity and low operating temperatures with very small footprint

- Updated, adjustable pump nozzle

- Optimum circulation and temperature distribution throughout the entire bath

- Spacious baths with large bath openings
- Thread sleeves as standard on the edge of the bath

- Accommodates various sample shapes and sizes with efficient flow
- Allow for the fixing of testing equipment without further conversion measures

- Intelligent cooling fan control
- Optimised cooling airflow
- Internal release valve

- Optimum heat discharge while reducing noise emission
- Bath drain at front of unit
- No protruding release valve

LAUDA Proline Kryomats

Proline Kryomats Air-cooled cooling thermostats

The air-cooled Proline Kryomats have a working temperature range from -50 and -90 up to 200 °C. The models are available with bath volumes of 30 and 40 liters. The Proline SmartCool system, with its energy-saving digital cooling management, ensures that the cooling output is run in accordance with the application needs. That saves up to 75 percent of energy compared to standard cooling methods. Two different booster pumps are available as options (ex works) especially for external applications that require a considerable increase in volume flow/ discharge pressure.

Proline Kryomats

Water-cooled cooling thermostats

In the case of the water-cooled Proline Kryomats, the process heat is dissipated with the use of facility cooling water. This largely prevents unnecessary heating of the surrounding environment. As a result of this type of cooling, even higher cooling capacities are achieved than with the air-cooled units. The electronic cooling water management minimizes water consumption. The booster pumps, available as options (ex works), are particularly recommended for external applications where increased volume flow or greater pressures are required.

Proline accessories

Shut down valve/Reverse flow protection

Reverse flow protection when thermostating external systems, to avoid over-flow when pump stops, for retrofitting with LiBus. Temperature range -40...140 °C

Cat. No.	Description
LCZ 9673	Shut down valve reverse flow protection with LiBus
Suitable for	All Proline devices

LCZ 9673

Solenoid valve

Water-conscious cooling on heating thermostats for cooling water control. Controlled cooling operation for exothermal reactions or controlled cooling with programmer. Up to 155 °C bath temperature.

Cat. No.	Description	Temperature range
LCZ 9662	Solenoid valve with LiBus-connector	-10...155 °C
Suitable for	All heating and clear-view thermostats	

LCZ 9662

Baskets

For notch bending test

Cat. No.	Suitable for
LCZ 0658	RP 870, RP 870 C, RP 890, RP 890 C
LCZ 0694	RP 1290, RP 1290 C

LCZ 0694

Constant level device

Necessary for the constant liquid level when thermostating open external baths. Connection set: for wall thickness of bath vessel between 0 to 30 mm, with opening for thermometers 4 mm or 1.9 mm Ø and clamping gland HX 077 and HX 078.

Cat. No.	Description	Suitable for
LCZ 0660	Level controller, mechanical	P 8 (C), RP 845 (C) RP 855 (C)*, RP 870 (C)*
LCZ 0679	Connection set for external inlet and outlet	LCZ 0660

* Not with option bath cover including bath edge heating (LCZ 9670)

LCZ 0660

LCZ 0679

Automatic filling device

For automatic replacement of liquid losses in thermostat bath, for example by evaporation. Also from vessels with max. 1 m suction height

Cat. No.	Description
LCZ 9661	Automatic filling device with LiBus

LCZ 9661

Controlled high-temperature chiller HTC with LiBus

For controlled cooling of thermostats in the operating temperature range up to 300 °C without formation of vapors, to be connected to external water cooling source.

Cat. No.	Description
LCZ 9663	Controlled high-temperature chiller HTC

Proline Kryomats accessories

Interface modules

An RS 232/485 interface is integrated as a standard feature. The control head is equipped for two interface modules to be plugged into the rear of the unit.

Cat. No.	Description
LRZ 912	Analog module, 2 x In, 2 x Out, 0(4)...20 mA or 0...10 V
LRZ 913	RS 232/485 interface, electrically isolated, 9-pin SUB-D socket
LRZ 914	Contact module NAMUR, 1 x In, 1 x Out, NE 28, 2 DIN socket
LRZ 915	Contact module SUB-D, 3 x In, 3 x Out, 15-pin SUB-D

LAUDA Integral

Process thermostats for professional external thermostating across a wide temperature range from -90 up to 320 °C

Application examples

- Process technology
- Process engineering
- Production
- Research
- Thermostating of stirrer tanks
- Temperature control of reactors in chemistry, pharmacy or biotechnology
- Thermal tests on test stands
- Use in material tests

Extremely flexible and rapid temperature change

Integral T and XT process thermostats are particularly suited for external temperature control of reactors, mini plants and calorimeters. They provide broad temperature ranges and rapid temperature changes. The temperature of external applications can be controlled precisely with defined heating and cooling speeds. With

the Integral T, internal circulation allows temperature control independently of external current resistances. The Integral XT units work on the basis of the flow principle with a cold-oil blanket. As a result, significantly greater temperature ranges and quicker temperature changes are possible.

Your advantages at a glance

+

The Integral T advantages

Your benefits

- Small active internal volume
- Bypass valve between inlet and outlet as a standard feature

- Rapid temperature change and effective control of exothermic reactions
- Pressure reducer to protect pressure-sensitive applications and glass

- Pivoting control unit with clear keypad and large display

- Easily accessible yet splash-water protected interfaces
- Easy and intuitive to operate

- Specific equipment range with heating outputs up to 9 kW and cooling outputs up to 13 kW
- Limited target temperature range from -30 to 150 °C

- Application-specific temperature control with high heating and cooling speeds
- Economical temperature control by limitation to essential functions

- Strong submersible pump, large expansion volume with overflow connection
- Additional pump as a standard feature with T 4600 units and larger
- Enhanced pump and low-pressure pump available as options

- Suitable for large external circuits
- Full cooling capacity independent from external flow
- May be adapted to various applications

- Compact design, all devices fitted with castors
- Remote control options available with use of accessory

- Saves valuable laboratory space
- Flexible positioning
- Mounting and sub-assembly option

LAUDA Integral T

Integral T Process thermostats up to 2.7 kW

Integral T process thermostats make rapid thermostating with powerful heating and cooling outputs combined with a small active internal volume possible. This minimises thermal drift and exothermic reactions are effectively controlled. Its compact construction is space-saving and the castor set makes the Integral T mobile.

The T control unit can simply be flipped open. The following interfaces are then accessible from below: connector for standby contact input, malfunction (alarm) contact output, analogue inputs and outputs, external Pt 100 and serial RS 232/RS 485 interface.

From the T 4600 units and larger, the Integral T is equipped with an additional pump allowing for more powerful circulation in the internal circuit. An adjustable bypass valve between the supply pipe and the bath of the external circuit allows for pressure reduction (e.g. in order to protect pressure-sensitive applications).

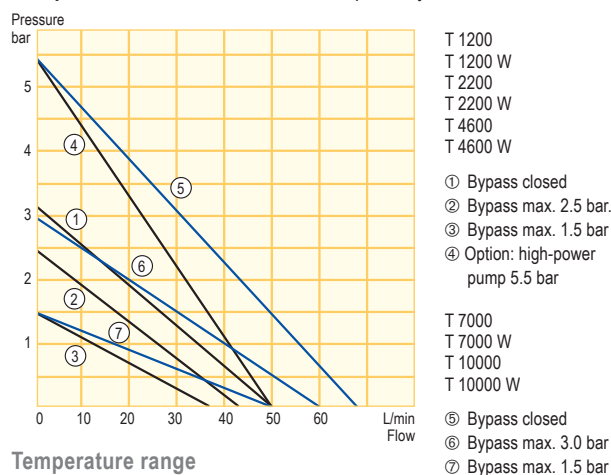

Process thermostat T 2200

- Programmer with max. 150 temperature/time segments, for up to 5 programs
- Parallel display of 2 temperature values and discharge pressure
- External control via Pt100 temperature probe or standard signal
- Analogue inputs (3) and outputs (2), can be configured to 0...10 V or 0/4...20 mA
- Error message for low level, overtemperature, pumps and cooling compressor
- Remote "malfunction" display and stand-by switch via neutral contact
- RS 232/485 interface for PC and LAUDA Wintherm Plus control software

Integral T Process thermostats up to 13 kW

The more powerful T 4600 to T 10000 W Integral process thermostats have a second pump for circulation in addition to the powerful circulating pump via an internal plate-type heat exchanger and therefore provide efficient and space-saving cooling. This enables a cooling output of 4.6 to 13 kW at 20 °C with the smallest internal bath volume.

LAUDA Integral XT

Extremely broad temperature range and rapid temperature changes:
LAUDA Integral XT

Application examples

- Temperature control of stirrer tanks
- Temperature control of reactors in chemistry, pharmacy or biotechnology
- Thermal tests on test stands
- Use in material tests

LAUDA Integral XT process thermostats allow extremely rapid temperature changes, resulting from the small, internal, thermally active heat transfer medium. The instruments work according to the highly

efficient flow principle with a broad working temperature range. The process thermostats are used where rapid temperature changes or high refrigeration and heating performance are required.

Your advantages at a glance

- Operation in ex-zones

- Eight-level Vario pump adjustment
- Infinitely variable control of pump pressure
- Magnetically coupled pump

- Application-specific adaptation of flow and pressure to the application
- Pressure reduction to protect pressure-sensitive applications
- No sealing problems at the pump shaft across the entire temperature range

- Two slots for interface modules available
- RS 232/485 interface included

- High flexibility for the user for the broadest range of system integrations

- Recessed filling inlet on the top of the equipment
- Practical drain taps on the sides of the equipment

- Simple filling with heat transfer liquid from the top of the unit
- Quick and complete drainage of the heat transfer liquid from the system

- Software-based/controlled filling and draining
- Automatic degassing after filling process

- Professional and safe start-up
- Temperature control of external application without gas introduction

- SelfCheck assistant shows equipment status clearly on the display

- High level of operating safety and constant monitoring of all equipment functions

LAUDA Integral XT

Integral XT Air-cooled process thermostats down to -80 °C

The LAUDA Integral XT process thermostats are ideally designed for the requirements of rapid and precise temperature control of an external application in process plant and pilot plant environments. The air-cooled process thermostats offer high performance in a small footprint while still providing functionality across a wide temperature range. The special high-temperature version enables process temperatures up to 300 °C. The models XT 750 S and XT 750 HS are available with increased heater power. The large expansion vessel in the LAUDA Integral XT absorbs temperature-induced changes in volume, thereby ensuring smooth operation even in large connected external systems.

Integral XT

Water-cooled process thermostats down to -50 °C

Independent of variations in ambient temperature, Integral XT water-cooled process thermostats achieve constantly high cooling performance. The temperature of the ambient air remains virtually unchanged due to the dissipation of the process heat through the cooling water. This is a particular advantage in setups similar to production as in process plants or in the mini-plant, where work is conducted under the most strained conditions. Water-cooled Integral XT systems are also the perfect choice for air-conditioned spaces, since they do not tax or place an unnecessary burden on air-conditioning systems. The XT 950 WS provides an increased heater power.

LAUDA Integral XT

Integral XT Water-cooled process thermostats down to -90 °C

The LAUDA Integral XT 1590 WS and XT 490 W process thermostats stand out for their high cooling outputs at very low temperatures. Thanks to the two-stage cascade system, the thermostats are particularly suited for applications in the ultra-low range down to -90 °C. The water-cooled devices achieve cooling outputs of up to 18.5 kW and maximum heating capacities of 10.6 kW. The XT 1850 WS provides an increased heater power.

Integral XT High-temperature thermostats up to 320 °C

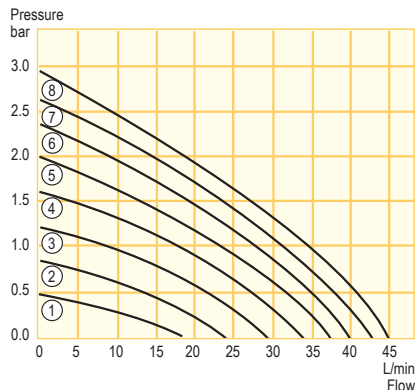

The LAUDA Integral XT high-temperature thermostats allow for a maximum working temperature of 320 °C. The process thermostats are operated using the Command remote control, which is already utilized in the other XT models. The powerful pump can be regulated at eight different levels, supplying a maximum pressure of 2.9 bar and a flow rate of up to 45 L/min. The model XT 4 H provides a heating power of 3.2 kW. The XT 8 H is equipped with an 8.0 kW heating system.

LAUDA Integral XT

Integral XT High-temperature thermostats with water counter-cooling up to 320 °C

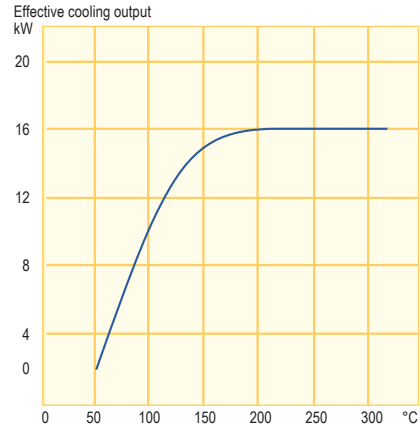

With the XT 4 HW and the XT 8 HW models, water-generated counter-cooling allows for quick cool-down across the entire temperature range from 30 up to 320 °C. Especially at higher temperatures, the water counter-cooling is very efficient and cost effective.

LAUDA Microcool

Circulation chillers for reliable continuous operation in the lab and in research from -10 up to 40 °C

Excellent price-performance ratio, compact design and simple to use

Application examples

- Cooling of rotary evaporators
- Cooling of distillation systems
- Supply of cooling traps
- Cooling of analytical devices

LAUDA Microcool has been designed as a circulation chiller line with four compact models and cooling capacities from 0.25 to 1.2 kW. The user interface with large LED display and the membrane keyboard make the devices easy to use. An RS-232 interface and alarm contact are integrated as standard. What is unusual in this price category

of circulation chillers is the high-quality block pump with magnetic coupling. The magnetic coupling of pump and electric motor exclude sealing problems on the pump shaft. LAUDA Microcool circulation chillers are used wherever heat needs to be dissipated reliable and fast, e. g. in laboratories for rotary evaporators, distillation systems or analytical devices.

Your advantages at a glance

The Microcool advantages

Your benefits

- Four device types in three housing sizes
- Cooling capacities from 250 W up to 1200 W

- Clear device portfolio for simple selection
- Covers the majority of basic lab uses

- User interface with large LED display and membrane keyboard
- Autostart timer and auto-shutdown function
- Illuminated window for checking heat transfer liquid level

- Simple and intuitive use
- Timer-based activation and deactivation of the circulation chillers
- Quick optical detection of the filling level

- Block pump with magnetic coupling of pump and electric motor
- Integrated adjustable bypass and pressure gauge at MC 600, MC 1200 and MC 1200 W
- Integrated overflow connection

- Prevents sealing problems at the pump shaft
- Integrated pump pressure adjustment for connected delicate glassware
- Controlled filling of the devices

- RS-232 interface and alarm contact standard

- System integration into processes without additional costs

- Compact design and low space requirements
- Integrated filling funnel on top of the device
- Easily removable front grid

- Saves valuable laboratory space
- Simple and safe filling
- Easy-to-clean condenser

LAUDA Microcool

Microcool Circulation chiller with cooling capacity up to 1200 Watt

The compact MC 250 makes it ideal for being positioned on the bench-top. The circulation chiller is equipped with a magnetic coupling pump. This supplies a pump pressure of 0.35 bar and a maximum pump flow of 16 L/min.

The 600 and 1200 Watt cooling capacity models are floor standing instruments designed to fit underneath the lab bench. They are equipped with a pressure gauge to display the pressure and casters which can be controlled and locked. Pump pressure can be controlled via the integrated bypass. At 1200 Watt, the most powerful device is also available in a water-cooled version as the MC 1200 W.

LAUDA Variocool

Circulation chillers for variable use in laboratory, mini-plant and production for temperatures from -20 up to 40 °C (optional up to 80 °C)

Application examples

- Central cooling water supply in laboratories
- Cooling of analytical devices
- Temperature control of bio-reactors
- Supply to cooling traps

Numerous options, compact design, easy operation

The **LAUDA Variocool** circulation chillers offer a broad performance spectrum for demanding temperature control tasks. The color TFT screen makes operation easy. A USB interface and an alarm contact are integrated as standard features. Additional interfaces are available as accessories. They are located in the front of the device, which means they are easy to access.

The circulation chillers with their multitude of options are very well suited to a number of different areas of application. Optional pumps, for example, enable higher pressures and flows. Optional heating units, which are adapted to the cooling capacity, enable the quick heating of the connected application when needed.

Your advantages at a glance

The Variocool advantages

Your benefits

- All models are equipped with electronic expansion valve and are marked with the „Energy Saving Star“ label.
- 13 models in air or water-cooled design with cooling capacities from 600 W up to 10 kW
- Due to their compact design, units up to 2 kW of cooling capacity can be placed under the laboratory table

- Very energy efficient models with good temperature control and cost savings thanks to reduced energy consumption
- The appropriate solution to every requirement
- Saves valuable lab space

- Display and operation via color TFT screen and membrane keyboard
- Electronic fill gauge on the display and low level alarm when fluid level too low

- Easy and clear setup options
- Early detection of insufficient fluid

- Options:
 - High power pumps
 - Heaters
 - Outdoor installation
 - Noise reduction

- Flexible customization to applications

- USB interface and alarm contact standard features in the front of the device
- Retrofittable interfaces as accessory:
 - analog module
 - RS-232/485 interface
 - contact modules
 - profibus module
 - Pt100/LiBus module

- Easy accessibility
- Flexible control options

- Front grill can be easily removed without tool
- Tower design for larger models (from VC 7000)
- Microchannel condensers in all air-cooled models
- All models (except VC 600) with adjustable bypass and pressure gauge

- Easy to clean condenser
- Space-saving setup
- Reduced footprint and lower refrigerant quantity
- Connection of pressure sensitive applications

LAUDA Variocool

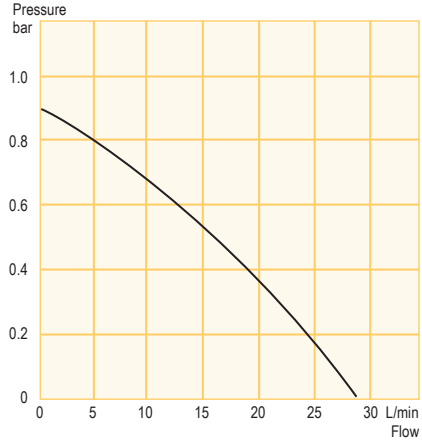

Variocool Circulation chillers with cooling capacities up to 2 kW

Variocool circulation chillers function in an operating temperature range of -20 to 40 °C. Optional heaters can be added to increase the maximum temperature to 80 °C. For greater pressure requirements, optional pumps are available with the VC 1200 version or higher. With the exception of the VC 600, all models are also available as water-cooled versions. All devices are equipped with lockable casters. The compact dimensions of the models from VC 600 to VC 2000 (W) allows to place them under the laboratory table.

Circulation chiller VC 600

Pump characteristic Heat transfer liquid: Water

Temperature range

-20...40 °C (-20...80 °C with optional heater)

* Working temperature range is equal to ACC range

**Using such a pump changes the available cooling capacity, and causes a change of the height of the housing from 650 mm to 790 mm for VC 1200 (W) and VC 2000 (W)

Variocool Circulation chillers with cooling capacities up to 5 kW

The models VC 3000 and VC 5000 offer cooling capacities of 3 and 5 kW. They are also available in water-cooled design (W). For flexible adaption to different applications the chillers can also be delivered with optional high-power pumps or heaters. Further options are an outdoor-installation and a noise reduction for the types VC 5000 and VC 5000 W.

Options Variocool

For all Variocool models, different options can be ordered. The options can only be affixed at point of production. Please check the tables below for compatibility of options with the corresponding circulation chiller type.

Options

Heaters	For all types. Extension of the temperature up to 80 °C.
High-power pumps	For all types, except VC 600.
Outdoor installation	For models VC 5000 up to 10000 W. An additional protection with a roof is necessary.
Noise reduction	For models VC 5000 up to 10000 W.

Options – not power supply dependent

LAUDA Calibration thermostats

Calibration and adjustment with LAUDA calibration thermostats at temperatures from -40 up to 300 °C

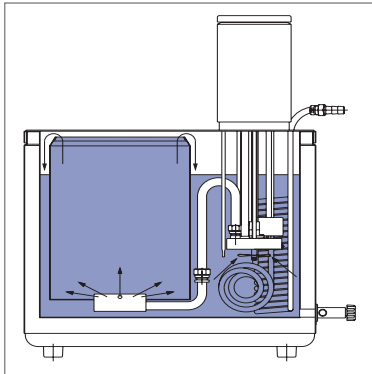

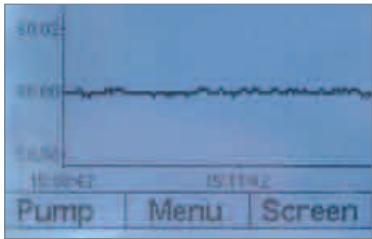

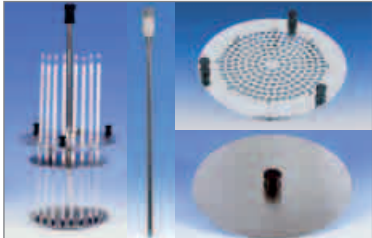

Application examples

- Industrial production
- Testing institutes
- Calibration of thermometers
- Quality assurance in the production of temperature probes

High temperature stability, variable sample vessels, extensive range of devices and accessories

LAUDA calibration thermostats are the first choice when it comes to temperature stability, greatest reliability, and homogeneity during calibration and adjustment. The high performance complete solutions for individual requirements are available in the Ecoline Staredition and Proline models. They differ in terms of size, bath-opening, and usable depth. Thermostats, in particular, are superior to heating cabinets and metal block thermostats as the heat transfer into the heat transfer liquid is 40 to 60 times better than through the air.

Your advantages at a glance

+	The Calibration thermostats advantages	Your benefits
	<ul style="list-style-type: none"> • Calibration thermostats available from two different product lines • Temperatures down to -40 °C achievable in conjunction with LAUDA cooling units 	<ul style="list-style-type: none"> • The ideal solution for any calibration task • Optimised adaptation to the application can be achieved by selection of the appropriate cooling unit
	<ul style="list-style-type: none"> • Specifically constructed internal calibration chamber based on the overflow principle • Specially insulated low-temperature thermostats available 	<ul style="list-style-type: none"> • Outstanding spatial temperature distribution and high temperature stability • Consistent immersion depths • Operation at low temperatures without formation of condensation on the outside of the devices • Operate reliably even at high ambient temperatures
	<ul style="list-style-type: none"> • Temperature stability of ± 0.005 K 	<ul style="list-style-type: none"> • Allows reliable and accurate calibration of temperature measuring instruments
	<ul style="list-style-type: none"> • Extensive range of accessories available 	<ul style="list-style-type: none"> • Reproducible submersion and calibration of the broadest range of test samples

LAUDA Calibration thermostats

Calibration thermostats Ecoline Staredition and Proline

The calibration thermostats of the LAUDA Ecoline Staredition range offer you temperature stabilities to ± 0.01 K at temperatures down to -30 °C. The RE 212 J model with its two-line display, digital interface and basic programmer is convincing. The even more user-friendly RE 312 J offers the possibility of external control for even better accuracy and the PC software LAUDA Wintherm Plus. In the heating range, the compact Proline PJ 12/PJ 12 C models reach maximum temperatures up to 300 °C. The PJL 12/PJL 12 C were designed especially for operation with the LAUDA DLK 45 through-flow cooler and reach temperatures down to -40 °C.

LAUDA Additional devices

Immersion coolers, through-flow coolers

Additional devices Immersion coolers

LAUDA through-flow coolers and immersion coolers are used as add-on devices to cool heating thermostats or any type of bath below ambient temperature. The preferred use of through-flow coolers is the use in conjunction with heating thermostats and integration into the cooling circuit.

LAUDA immersion coolers provide a quick way to extend the temperature range downwards when used in conjunction with heating thermostats, water baths and cooling traps. The thermostats work on the classical principle of direct evaporation, and the flexible hose connection means that they can be used without any problems. The ETK 50 even has adjustable temperature control.

Cooling using the LAUDA immersion cooler ETK 30

- Compact space-saving construction
- Carrying handles for easy transport
- Cooling coil made from high-grade stainless steel
- Flexible tube connection with special insulation (length 1.5 m)

Temperature range

-50...20 °C

Cat. No. 230 V; 50/60 Hz		LFE 002	LFE 103 (230 V; 50 Hz)

Additional devices Through-flow coolers

LAUDA through-flow coolers upgrade any type of heating thermostat with pump connections to a high-quality cooling thermostat and thus allow working below ambient temperature. Through-flow coolers replace cooling with tap water that is expensive and ecologically not recommendable. They provide a constant flow and temperature of cooling supply regardless of the variations. Therefore, it is possible to ensure optimum temperature stability over the entire period and allow reproducible temperature conditions at any time.

- Air-cooled, fully hermetic and thus absolutely maintenance-free cooling aggregates with heat exchangers in reasonable dimensions
- Heat exchangers are made from stainless steel.
- All refrigerated parts inside the through-flow cooler are perfectly insulated. Therefore no condensation of water or risk of corrosion.
- Low noise emissions

Temperature range

LAUDA Overview of accessories

Overview of accessories for constant temperature equipment

The operation of constant temperature equipment often requires the use of accessories. Only with the appropriate testing stands, connecting parts, reducers, various tubing/hose connections, distributors or interface modules, etc. the applications can be achieved successfully.

Additional equipment

Solenoid valve for cooling water control

Proline shut down valve/reverse flow protection

Level controller

Proline automatic filling device

Alpha accessories

Temperature probes

Platinum resistance thermometers in stainless steel tube

Connecting cables

Connecting cables

- Match your LAUDA equipment exactly; developed, constructed or programmed specifically for it
- Tested for practicality – your LAUDA contact person knows what works and what is appropriate
- Robust – LAUDA accessories are designed for durability

Order the detailed LAUDA accessories brochure. This and additional product information can also be found at www.lauda.de

Connecting plugs

Connecting plugs

Bath covers

Stainless steel bath covers

Stainless steel gable covers

Cover plates for clear-view thermostats

Overview of accessories for constant temperature equipment

Racks, platforms

Polycarbonate racks up to 100 °C

Polypropylene test tube racks, up to 95 °C

Stainless steel racks up to 100 °C

Stainless steel racks up to 300 °C

Stainless steel test tube racks up to 150 °C

Racks for calibration thermostats

Platforms and adjustable platforms

Accessories for notch bending tests

Accessories for pour point determination

Tubing

Polymer tubing

Insulation tubing

Hoses

Metal hoses (stainless steel flexible hose)

Equipment trolley

Equipment trolley and castor base

Connectors

Connectors

Screw caps

Manifold for temperature range -10...100 °C, for use with water/glycol

Manifold for temperature range -30...150 °C, for use with silicone oil and water/glycol

Integral XT bypass

Adapters

Double connectors

LAUDA Heat transfer liquids

Heat transfer liquids

Correct selection of the heat transfer liquid is of crucial importance for the safe and reliable operation of your thermostats. It must be suitable for the temperature range. In addition you should always use suitable tubing/hoses. More details can be found in our special brochure "Heat transfer liquids". Additional accessories are listed in the accessories brochure. Safety data sheets with the physical properties can be found on our website at: www.lauda.de.

Thanks to our decades of experience and continual tests we can offer you optimum heat transfer liquids for all LAUDA thermostats. Heat transfer liquids are available in three packing units: 5, 10 and 20 liters. When calculating the amount to be ordered, please consider the volume of the thermostat and the external circulation in addition to the bath volume.

In the table below, you can see precisely which heat transfer liquids are suitable for which temperature ranges. Please note that these details always relate to the temperature range of the heat transfer liquid, which is the limiting factor.

- Highly accurate thermostating, even at extreme temperatures
- Durability
- Simple and safe handling
- Reliability, suitable for long-term operation
- Optimal for long thermostat life
- Best possible compatibility with the environment
- Safety data sheets available upon request

Order the detailed LAUDA brochure heat transfer liquids free of charge. This and additional product information can also be found at www.lauda.de

Wintherm Plus software

All LAUDA ECO Silver and ECO Gold thermostats, all Ecoline Staredition thermostats with control heads E 200 and E 300, all Proline thermostats and Proline Kryomats, all Ultra-thermostats, all circulation chillers Variocool, Microcool and WK/WKL with interface, and all LAUDA Integral process thermostats can be controlled from any PC with the LAUDA Wintherm Plus software. Requirements of the PC: at least 64 MB RAM, serial interface or USB interface or Ethernet interface.

Wintherm Plus features

- Remote setting of temperature set-point and live observance of actual bath temperature
- Monitoring of external temperature values
- Online graphic display of all values with a readily selectable time window to reduce the amount of data or to increase resolution
- Temperature program editor to create and archive temperature profiles and ramps
- Complete control of all thermostat functions such as control parameters, temperature range and pump capacity*
- Each measuring graph can be imported as an ASCII file or D-Base database into spreadsheet programs such as Microsoft Excel.
- A separate read and display software makes it possible to view and print out existing graphs in parallel and independently of the controller sections.
- Read-out of the data logger for devices with remote control Command or ECO Gold thermostats or Variocool
- Every measuring curve can be imported directly as bitmap or metafile into all graphic programs and Microsoft Word.
- Simultaneous control of up to 16 thermostats
- Serial interfaces of the PC can be addressed as RS 232 or RS 485.
- Driving of the thermostats via USB for ECO and Variocool as well as per Ethernet
- Automatic recognition of connected thermostats
- Operating languages: German and English
- Supported operation systems: Windows XP, Windows VISTA, Windows 7 (32 and 64 Bit), Windows 8 (32 und 64 Bit)

* Pump capacity not controllable with Wintherm Plus on LAUDA USH, WK/WKL, Microcool, Variocool and Integral T

Device functions

EasyUse operation (Proline)

Drain taps, castors and handles for increased mobility, double pump connections for the parallel connection of two external systems, switching of the circulation (bypass), removable Command remote control, and quick change of the required interfaces.

External control

The temperature of the thermostat is controlled via a temperature probe connected to the external system. The set value is compared with the actual value in the external system and readjusted within the thermostat. Depending on the operating temperature, insulation losses and exothermia, the bath temperature can be considerably above or below the set value. External control ensures that the bath temperature and application temperature are constant.

PowerAdapt System (Proline)

The maximum possible heating capacity is used as far as is permitted by the net. Advantage: up to 3.5 kW heating capacity even with cooling thermostats, shorter heating times and no overloading of the net. The patented LAUDA heater control minimises the loading effects on the laboratory's voltage network. Moreover, the maximum power consumption can be reduced to 10 A as required.

Proportional cooling (Kryomats, Process thermostats)

The cooling output is quasi-proportionally set according to the controller signal. This produces savings of around 75 percent compared to standard cooling that uses cooling and counter-cooling. The automatic cooling output adjustment also switches the cooling unit off completely should no cooling be required for a longer period of time.

SelfCheck Assistant (Proline, Integral XT)

The SelfCheck Assistant checks all parameters before the actual start of operations and the switch-off methods of the heater control in particular. The system registers not only alarm or error messages on the display: it also points out scheduled maintenance tasks such as cleaning of the cooling grid.

SmartCool System (Proline)

A special form of proportional cooling combined with a regulated ventilator.

Types of device

Bath/circulation thermostat

Is a bath thermostat with a circulating pump for closed or open external circuits.

Bath thermostat

Is a thermostat which is equipped with a bath capable of holding the object to be thermostated. The built-in circulation pump is used to mix the bath liquid, but can also be used to convey the liquid through a closed external circuit, e.g. the connection of through-flow coolers, if required.

Calibration thermostat

Is a bath thermostat with especially high temperature stability and especially consistent spatial temperature distribution. It is used mainly for the calibration and adjustment of test pieces in the bath.

Circulation chiller (also circulating chiller)

Are special cooling thermostats designed as circulation thermostats without a freely-accessible bath. Thanks to their construction, they are independent devices which are frequently used as a replacement for the cooling with mains water.

Circulation heat exchanger

Is a through-flow cooler which, via a heat exchanger, uses an existing primary cooling circuit to cool various external systems.

Circulation thermostat

Is a thermostat through which the bath liquid is conveyed through an open or closed external circuit.

Clear-view thermostat

Is a bath thermostat with transparent front and back to enable viewing of an object to be thermostated, usually a viscometer. Bath thermostats with transparent polycarbonate baths are known as thermostats with transparent bath.

Cooling thermostat

Is a thermostat whose working temperature range is below the ambient temperature.

Heating and cooling thermostat

Is a thermostat whose working temperature range is above and below the ambient temperature and which can both heat and cool.

Heating thermostat

Is a thermostat whose working temperature range is above the ambient temperature and which can only heat.

Immersion thermostat

Is a thermostat which can be combined with any bath. It is attached to the side of the bath or on a stand by means of a screw clamp.

Immersion cooler

Is an add-on cooler which is connected by means of a flexible tube to a cooling coil for immersion in any bath or vessel.

Kryomat

Is a floor-mounted heating and cooling thermostat in three different levels with various cooling and pump capacities.

Process thermostats (Integral T, Integral XT)

Are circulation thermostats used as heating and cooling thermostats with high cooling, heating and pump capacities. Small volumes of liquid enable quick cooling-down and heating speeds: they are ideal for process technology applications.

Through-flow cooler

Is an add-on cooler which can be interconnected in an external circuit and which extends the function of a heating thermostat to that of a heating and cooling thermostat. It replaces water cooling or can be used to achieve lower temperatures (down to -40 °C with the DLK 45/DLK 45 LiBus).

Ultra thermostats

Are heating thermostats used as bath/circulation thermostats or as pure circulation thermostats with spatially-separated bath and control unit. This enables remote control and monitoring.

Water bath

Is a heating bath which does not have a pump for active mixing purposes and which is only equipped for use with water.

Refrigeration technology

Cooling output

Is the effective output available in a cooling thermostat or circulation chiller. Losses caused by the circulating pump and invasive heat have already been deducted.

Cooling cascades

If temperatures below -50 °C are to be produced with compressor cooling units, two-stage cooling units connected in cascades are required to bridge the difference between the cold side (evaporation pressure) and warm side (condensation pressure, e.g. ambient temperature). The high-pressure stage bridges the temperature difference from approx. ambient temperature to -40 °C, for example. The low-temperature stage provides the final temperature of -90 °C, for example.

Refrigerant

Is used in the circuit of the cooling unit and extracts the heat of the thermostating liquid when the compressed gas expands and evaporates in the evaporator. LAUDA only uses refrigerants with ODP = 0 which do not destroy the ozone layer (ODP = ozone depleting potential). In several LAUDA thermostats natural refrigerants are used. Natural refrigerants are naturally occurring, non-synthetic substances. In addition to a ODP of zero they also have a very low GWP (global warming potential).

Pumps

Pressure pump

Is used for the circulation of the bath liquid in a closed external circuit and for mixing the liquid within the bath.

Vario pump (ECO, Integral XT)

Is a pressure pump which can be set to various output stages with regard to flow rate and flow pressure. This enables the optimum adaptation to the corresponding application.

Varioflex pump (Proline)

Is a pressure/suction pump with 8 different pump capacity settings to be connected to open and closed circuits. Its low energy input makes working at the lowest temperatures possible. The Varioflex pump is available in a high-power model as a pure pressure pump for devices with deeper baths. The patented low-level protection (DGM) is an additional safety advantage.

Technical data of LAUDA devices

ACC range (Active Cooling Control): according to DIN 12876

This is the working temperature range during operation with an active cooling unit. The working temperature range is equal to the ACC range in all LAUDA devices.

Ambient temperature range

This is the permissible temperature range of the environment in which the device works properly. It is 5...35 °C for all LAUDA devices contained within this brochure with the exception of the ECO, Integral and the WK devices, where the latter is extended to 40 °C. This is particularly important with respect to industrial applications.

Bath depth

Is the overall dimension from the upper edge to the bottom of the bath.

Bath opening

Is the usable surface available for direct thermostating, as a rule over the entire usable depth.

Bath volume (also filling volume)

Is the volume of the bath liquid that is required for the appropriate operation of the thermostat in the bath. The required minimum volume and the permitted maximum volume are usually given. The difference is the expansion volume, which must absorb the heat expansion of the bath liquid. The expansion volume is especially large with process thermostats.

Discharge pressure

Is the pressure of the circulation pump of a thermostat directly at the pressure nozzle, measured with water. In the tables, the maximum discharge pressure is given at flow rate zero. The diagrams illustrate the discharge pressure is dependent upon the flow rate.

Discharge suction

This is the suction of the circulation pump (Varioflex or Duplex pump) directly at the suction nozzle, measured with water. In the tables, the maximum suction is given at flow rate zero. The diagrams illustrate the discharge suction is dependent upon the flow rate.

Display resolution

Is given with regard to the digital temperature display of the actual value, and displays the temperature difference between two subsequent numbers.

Flow rate

Is the volume of liquid conveyed per time unit by the circulation pump, measured with water. In the tables, the maximum flow rate is given at counter pressure zero. The diagrams illustrate the discharge pressure is dependent upon the flow rate.

Heating capacity

This is the maximum electrical capacity of the installed heater at the given nominal voltage. The heating capacity of LAUDA thermostats may be controlled if required.

Interface, analogue

Is used to input the set value of the temperature/to output temperature values or other values in analogue form, usually as a reference signal with voltage (0...10 V) or current (0/4...20 mA). Relevant LAUDA interfaces are adjustable and scalable.

Interface, digital

Is used to exchange digital data, mainly set and actual temperature values. The RS 232 interface is of a serial type and allows a point-to-point connection. This means that only two participants can communicate at a time with each other via the interface. The RS 485 interface is an addressable interface to which up to 32 participants with their own address may be connected.

International protection, IP

As per EN 60529. The first digit indicates the protection against contact and foreign objects, whereas the second digit indicates protection against water. For example, IP 32: 3 stands for protection against contact with dangerous parts located inside with a tool of greater than/equal to 2.5 mm diameter and up to 100 mm in length. 2 stands for protection against dripping water at angles of 15°. The assessment is carried out as per EN 61010-1. The LAUDA range only provides IP information for process thermostats and circulation chillers.

Intrinsic temperature

Is the operating temperature of a heating thermostat attained when the thermostat is switched off. It depends on the pump capacity, the heat transfer liquid used and the insulation of the thermostats. The working temperature range only starts approx. 3 °C above the intrinsic temperature.

Operating temperature range

This is the temperature range defined by the lowest and highest permissible operating temperature. As a rule, this is only given for heating thermostats whose working temperature range can be extended to lower temperatures by means of auxiliary equipment.

Profibus

Is a bus system with a high signal transfer rate for connecting up to 256 devices and is used mainly in the chemical industry.

Resolution setting

Is the difference between two consecutive set values of a digital set value setting.

Safety class

It is possible to use non-flammable or flammable bath liquids in thermostats. The relevant safety-related requirements are stipulated in DIN EN 61010-2-010. According to DIN 12876-1, we make a distinction between class I with the distinction NFL (non-flammable) with built-in overtemperature protection exclusively for non-flammable liquids, and class III with the distinction FL (flammable) with adjustable overtemperature protection and low level protection for flammable liquids.

Sound pressure level

Is measured according to the guidelines given in DIN EN ISO 11200 and the basic standards contained therein.

Standard

The safety regulations for electric laboratory equipment are stipulated in the European standards EN 61010-1 and EN 61010-2-010. The terms and the stipulation of the characteristic data are described in DIN 12876. EMC requirements are stipulated in EN 61356. Depending on the device, further standards may be applied.

Temperature stability

This is half of the temperature difference between the highest and the lowest temperatures which are measured at a specific set value after attaining a stable value for 30 minutes in a thermostat. The details are provided at 70 °C (using water) for a heating thermostat and at -10 °C (using ethanol) for a cooling thermostat.

Usable depth

Is the maximum liquid depth available in the bath thermostat for direct thermostating.

Working temperature range

This is the temperature range which can be attained at an ambient temperature of 20 °C by the thermostat alone and with the exclusive use of electrical energy and without any other aid. The working temperature range of a heating thermostat begins above the ambient temperature and ends at the upper limit of the operating temperature.

Our product lines:

Thermostats · Circulation chillers · Water baths

Process cooling systems · Heat transfer systems · Secondary circuit systems

Viscometers · Tensiometers

1-113-e-7/2.14 – Subject to technical changes.
